## **LEARN THE ABC OF PROGRAMMING IN C AND C++**

**ENROL IN OUR PROGRAMME  
FOR A CAREER IN PROGRAMMING.**

Concepts and knowledge of C and C++ are the stepping stones to enter the world of IT Programming.

Learning these 2 programming languages will ensure easy understanding of most modern-day programming languages.

Questions on concepts of C and C++ yet remain the favorite with Employers recruiting programmers for S/W Development roles

While C as a language provides dual features of portability to run on any platform as well as power to control hardware, C++ is an object-oriented programming language for application development and is simple, modern and general purpose.

## Who can apply?

School Students, Undergraduates and Graduates who want to start their journey in the area of software engineering, development and programming and can build flowcharts and write pseudo-code with knowledge of working in a Windows environment and using editors can apply for the programme

## How does it Help?

The course curriculum design covers all the major aspects of basics and intermediate C programming along Object Oriented programming and its implementation using C++. It provides hands on Knowledge in C and C++ and helps the students in implementing these programming language to solve complex problems.

The programme not only provides curriculum support to learners , but also helps them in learning new skills like creating a small software like “Event Planner” or an application like simple “Attendance system”etc.

## What will you Learn?

Use input-output functions, understand data types and conditional statements

Use operators and arrays

Implement Linked lists

Implement Pointers

Define and implement OOPS concepts

Use constructors and destructors

## How does NIIT give you an edge?

More than 30,000+ Learners in C and C++ programming

Faculty with industry experience

India's most trusted training brand

35 million learners worldwide
